PROFESSIONAL SUMMARY

Junior Data Analyst with 12 hands-on, end-to-end projects turning raw business data into decision-ready insight — from SQL data modeling and Power BI dashboards to Python-based forecasting and predictive risk scoring. Background in HR Operations gives a strong edge on workforce and payroll analytics specifically. Also comfortable building lightweight, custom interactive dashboards with React when a project calls for web-based delivery beyond standard BI tools.

CORE SKILLS

- **Data Analysis & BI:** SQL (Joins, CTEs, Window Functions, Self-Joins) · Power BI (DAX, Live ODBC Connections) · Excel (Star Schema, Power Query, PivotTables, XLOOKUP) · Python (Pandas, NumPy, Scikit-learn, Prophet)
- **HR & Operations Analytics:** Workforce & Attrition Analysis, Payroll & Attendance Systems, HR KPI Dashboards
- **Additional — Front-End Development:** React, Tailwind CSS, Recharts — building custom interactive dashboards and portfolio-grade web apps

FEATURED PROJECTS

E-Commerce SQL & Geo-Spatial Analytics — *SQL, Python (Prophet), Power BI*

- Modeled delivery performance across 99,441 orders; found only 7.9% of orders are actually delayed and that shipping distance does not drive delay — informing a data-backed reduction of the delivery-date safety buffer.
- Built a Facebook Prophet revenue forecasting layer (MAPE 17.57%) projecting \$7.20M in 6-month revenue for planning.

Customer Retention & LTV Intelligence — *Python, SQLite, Power BI*

- Built an RFM and churn-risk scoring model isolating a High-Value-at-Risk segment of just 29 customers (0.67% of the base) holding \$192K in at-risk revenue — 3x the average customer's lifetime value.

Multi-Platform Delivery Sales Reconciliation — *Excel, Power Query*

- Reconciled POS sales against 5 delivery platforms with different commission structures (98.6% matched-orders rate), catching a confirmed revenue leak and quantifying a 20.9% effective platform cut on gross sales.

HR Employee Attrition Analysis — *Excel, Python (Logistic Regression)*

- Identified overtime as the strongest attrition driver (30.5% vs 10.4% departure rate); corrected a class-imbalance issue in the predictive model, raising recall on true attrition cases from 23% to 70%.

Sales Performance & Profitability Analytics — *Power BI, Power Query*

- Analyzed \$829K in sales at a 32.87% margin; found the Corporate segment carries an 18% higher average order value than retail despite being only 14.63% of volume.

HR Workforce Analytics — *SQL, Power BI*

- Disproved the assumption that poor performance drives attrition across 1,562 employees (2.95 vs 3.05 average rating, stayed vs. left) — redirecting retention strategy toward compensation and satisfaction.

Full portfolio — all 12 projects with live case studies: fathallah-portfolio.vercel.app

ADDITIONAL CAPABILITY — FRONT-END DASHBOARD DEVELOPMENT

- Digital Marketing & E-commerce Performance Dashboard — React, Tailwind CSS, Recharts, Power BI, SQL: built a custom interactive web dashboard (dynamic filtering, campaign-response heatmap, client-side CSV export) layered on top of SQL analysis and a Power BI executive report — demonstrating the ability to deliver analytics through a custom web front-end when a project calls for it, beyond standard BI tooling.

EDUCATION

Bachelor's Degree in Educational Technology — Grade: Very Good

Faculty of Specific Education, Menoufia University — Graduated May 2025
